

## DATA SHEET

# 24" Widescreen Flat Panel Industrial Displays

Premium Quality STRONGARM Built Displays (NEMA 12/4/4X)

### Features

- ▶ Designed for harsh and demanding **industrial environments**.
- ▶ **NEMA 4/4X** for washdown and wipedown applications.
- ▶ **Precision-milled, Heavy-duty Bezels** ensure a longer display life.
- ▶ **Polycarbonate Viewing Windows** are scratch-resistant and UV-resistant.
- ▶ **Touchscreen Options** for every industrial environment.
- ▶ **Powder-coated Aluminum Bezels** can be provided with custom colors or choose from a variety of stock colors.
- ▶ **Private Labeling** available for OEM manufacturers.
- ▶ **Class I Div II Certified** when mounted in a classified enclosure.
- ▶ **Stainless Steel Bezels** come standard with a #4 satin brush finish. 304 and 316 SS options.
- ▶ **Available from Stock**
- ▶ **Standard 3 year warranty**
- ▶ **UL/cUL/CB Listed, Type 12/4 and 12/4/4X (IP 65/66)**

### • Industrial Strength

STRONGARM's PanelMount Displays are designed to survive the most demanding industrial applications. The display elements are integrated directly into precision-milled aluminum or stainless steel bezels and are protected by polycarbonate windows, or various touch screen options.

### • Current Technology

STRONGARM uses the most current technology available. You can be sure that the STRONGARM display you purchase today is not yesterday's trailing edge.

STRONGARM's unique combination of technology and industrial design makes us the industry leader in industrial displays for every application.

## Touchscreen Specifications

### Resistive Touchscreen

The Resistive Touchscreen uses a glass panel overlay with a uniform resistive coating. A polyester coversheet is tightly suspended over the top of the glass, separated by small, transparent insulating dots. The coversheet has a hard durable coating on the outer side and a conductive coating on the inner side. When the screen is touched, the conductive coating makes electrical contact with the coating on the glass. The voltages produced are the analog representation of the position touched. The controller digitizes these voltages and transmits them to the computer for processing. Resistive touchscreens work well with almost any stylus-like object, and can also be operated with gloved and bare fingers.

<b>Touch Activation Force</b>	Less than 4 ounces, typical
<b>Accuracy</b>	0.080 inches, typical 0.180 inches, minimum
<b>Touchpoint Density</b>	4096 x 4096 or > 100,000 touchpoints/inch
<b>Temperature</b>	Exceeds display rating

### Infrared Touchscreen *(for applications where touchscreen is exposed to extreme abuse)*

The Infrared Touchscreen relies on the interruption of an IR light grid in front of the display screen. Integrated into the display bezel is an opto-matrix frame that contains a row of IR-light emitting diodes (LEDs) and photo transistors, each mounted on two opposite sides to create a grid of invisible infrared light. The opto-matrix frame is isolated from the outside environment by an IR transparent barrier. The IR controller sequentially pulses the LEDs to create a grid of IR light beams. When a stylus, such as a finger, enters the grid, it obstructs the beams. One or more of the phototransistors detects the absence of light and transmits a signal that identifies the X and Y coordinates. Because the infrared scanning is done in front of the display, a bulletproof, 3/8" thick polycarbonate window is installed between the IR grid and the display itself. This window provides a level of environmental protection for the electronics that is unique to the infrared touchscreen technology.

<b>Touch Activation Force</b>	No minimum required
<b>Accuracy</b>	0.047 inches (21 points/inch) typical, using stylus greater than ¼ inch diameter 0.22 inches (5 points/inch) minimum
<b>Stylus</b>	¼ inch diameter, minimum
<b>Display Window</b>	3/8 inch Lexan brand polycarbonate with Marguard surface treatment
<b>Temperature</b>	Exceeds display rating

## Specifications

### Display

<b>Size:</b>	24" (16:9 Aspect Ratio)
<b>Brightness:</b>	250 nits
<b>Contrast Ratio:</b>	1000:1
<b>Native Resolution:</b>	1920 x 1080
<b>Colors:</b>	16.7 M
<b>Other Supported Resolutions:</b>	1600 x 900, 1366 x 768, 1280 x 720

### Power

<b>Consumption</b>	25W
<b>Input</b>	AC 90-264V~ 50/60Hz (1.4A max) DC 12-24V (6A max)

### Environmental

#### Operating Conditions

<b>Temperature</b>	32°F to 122°F (0°C to 50 °C)
<b>Humidity</b>	20 % to 95 % non-Condensing

#### Storage Conditions

<b>Temperature</b>	-4°F to 140°F (-20°C to 60°C)
<b>Humidity</b>	5 % to 95 % non-Condensing

### Physical

<b>Weight</b>	No Touchscreen: NEMA 4/12: 13.2 lb (6.0 kg)      NEMA 4X: 13.9 lb (6.3 kg)
	Resistive Touchscreen: NEMA 4/12: 14.0 lb (6.3 kg)      NEMA 4X: 15.0 lb (6.8 kg)

### Connections

<b>Video Input</b>	DVI, VGA
--------------------	----------

## Ordering Information

### NEMA Series

<b>304</b>	NEMA 4/12
<b>404</b>	NEMA 4X

### Touchscreens

<b>0</b>	None
<b>T</b>	Resistive
<b>R</b>	Infrared

### Transflective Options

<b>0</b>	None
<b>V</b>	Transflective: Enhanced Readability for Outdoor Applications

### Display Power Input

<b>A</b>	120-240 VAC
<b>D</b>	12 VDC
<b>V</b>	24 VDC
